

# TERRAZZO

FUTAR

# MADE IN ITALY

Hailed from the heart of where terrazzo was first created in the north of Italy in the 15th century, these Italian-made terrazzo slabs are made by the best fabricators with over 25 years of “know-how”.

The selection of the best raw materials and the use of advanced technologies creates a high quality and reliable product with excellent technical performances such as resistance, durability through the years and ease of maintenance.

The product is also sustainable, having a high percentage of pre-consumer recycled content. Only natural raw materials without any chemical addition are also carefully chosen, to improve the quality and safety in the areas where it will be laid.

## CARE AND MAINTENANCE

### First Cleaning

Post-laying cleaning is very important to secure a lasting beauty and to maintain the high value of the material over many years. An inadequate or late first cleaning can alter the surface appearance.

### Impregnation

Our experience of over 30 years and that of many layers shows the importance of laying untreated materials. Before filling and treating the terrazzo, it is necessary that the material become completely dry. The impregnation of material before the laying is not recommended, because the humidity of the material and of the mortar can't dry uniformly, but only through the open joints. The consequences of a not uniform drying can be difference of colours on the surface and cracking. The times for the completely dry of the material are approximately from 4 to 6 weeks. The wait times are only indicative and can change depending on weather and circumstances of the project.

### Regular Cleaning

For a daily cleaning we advise to use only hot water with a ph neutral detergent, without additives.
